DETAILED ACTION

Claim Objections

1. Claim 21 stands objected to because of the typo error in the phrase "is receives".

Claim Rejections - 35 USC § 103

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
3. Claims 1-6, 8, 11-23, 25, 26, 28-32, 34-37, 39, 42-48 and 50-56 stand rejected under 35 U.S.C. 103(a) as being unpatentable over Lee (US 4,789,801) in view of Natarajan et al. (US 4,264,343), for reasons as of record.
4. Claim 49 stands rejected under 35 U.S.C. 103(a) as being unpatentable over Lee '801 in view of Natarayan '343, Weinberg '637 and Satyapal et al. (US 5,879,435), for reasons as of record.

Response to Arguments

5. Applicant's arguments filed October 3, 2005 have been fully considered but they are not persuasive.

In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, Lee discloses the use of the device as an electrostatic precipitator (see abstract) and further the refinement in the device for the increase of the precipitation efficiency (col. 10, lines 14-19), and suggests the use of intersecting non-mutually insulated electrodes in addition to the parallel mutually insulated electrode (col. 14, lines 13-25) and Natarajan shows, when additional electrodes are used downstream from the emitted electrodes if not embedded in a dielectric material, arcing or sparking occurs between the electrodes and the collector electrodes and the precipitation efficiency decreases (see abstract and col. 1, lines

42-48). As such, the motivation to combine Lee with Natarayan would be to embed the electrodes downstream from the emitter electrodes with a layer of a dielectric material to prevent arcing or sparking between the electrodes and the collector electrodes while increasing the precipitation efficiency.

In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986).

As to the rejection of claim 49, since Lee with Natarayan shows the above embedded electrodes, the rejection stands.

Conclusion

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the

advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
